

Vector Pipeline™

Pipeline Safety and Emergency Information

for emergency and public officials

Vector Pipeline (Vector) is a 348-mile natural gas transmission pipeline that is operated by Enbridge. You are receiving this brochure because we have identified you as an **Emergency or Public Official** with responsibilities near Vector's natural gas pipeline and/or related facilities. Please keep this brochure and share this important information with other emergency and public officials.

Emergency number: 1-888-427-7777

Contents:

Safe digging information	3
How to determine where our pipelines are located	4
Crossing or traversing the right-of-way (ROW)	7
Emergency information and response procedures	9
Information on pipeline safety, including how to identify a leak and respond in the event of an emergency	11
How to contact Vector	12

After reading this brochure, please scan the QR code with your smart device or visit enbridge.com/surveys to complete an online survey for a chance to win an \$800 grant.

About Vector

Awareness today means safer tomorrows

Tomorrow is more than just the energy we transport. It's the energy we put in. It's the time we spend volunteering. It's our commitment to sustainability and the environment. It's the investments we make in our community to ensure the places we live and work are safe and vibrant. It's because we see the potential in people and care about the world around us. Tomorrow is on, and we're committed to making it better.

Please scan the QR code to learn more about **Tomorrow is on: Enbridge** and the energy transition.

As an Emergency or Public Official, you need to be aware of the Vector pipelines in your area and how to respond safely and effectively to a pipeline emergency. At your request, we can provide additional Vector information including the pipeline's location and size and the contents transported. For additional resources, details on emergency response drills in your area, to talk to a Vector representative or to schedule a Vector presentation during your next meeting, please call **1-888-293-7867** or email us at **uspublicawareness@vector-pipeline.com**.

Pipeline purpose and reliability

The United States has the largest pipeline network in the world. Data collected by the U.S. Department of Transportation reports pipelines are the safest way to move energy resources like the crude oil, natural gas and other petroleum products Enbridge transports. We are committed to the safe and reliable operation of our pipelines in your community. Every year, our company invests in the latest technology and training to meet the high environmental and safety standards expected by those who live and work near our pipelines.

About Vector

Vector transports approximately 1.7 billion cubic feet per day of natural gas eastward from Joliet, Illinois, in the Chicago area, through parts of Indiana and Michigan and into Ontario, Canada. The system has multiple interconnects with gas distribution companies, storage providers and power plants located in Michigan, Indiana, Illinois, and Ontario. It also has the ability to flow gas westward, connecting gas sourced in Michigan from both Appalachia production and storage providers to markets located throughout the Midwest (MI, IN, IL and WI).

Make the call or click before you dig

 **Risk:** Failure to dig safely can endanger yourself, emergency responders and your community. Safe digging practices can save your life.

If you see someone digging or disturbing the soil and there are no flags or marks on the ground, please call Enbridge's 24-hour emergency number. When planning a digging project, one should not rely on word-of-mouth, maps, memory or pipeline markers.

Please make community members, permit applicants, public works departments, excavators, contractors and developers aware that they need to make a locate request by following the steps listed below.

One-Call requirements

1 At least two to three business days before your project—any time you are disturbing the soil—(depending on state law), call **811** or visit **clickbeforeyoudig.com**.

2 When you call or click, you'll be connected to a representative, who will ask you to provide important details about your project, such as the type of work you'll be doing, where you'll be doing it and when your project is expected to begin.

3 The One-Call center representative will provide this information to pipeline operators, such as Enbridge and other companies with buried utilities near the work site, saving you the time and trouble of contacting them individually.

4 Within a few days, professional locators will come to your location and mark underground utility lines—including pipelines (marked with yellow flags or paint)—so you can work around them, saving yourself from possible injury or property damage.

811 and clickbeforeyoudig.com are only for digging.

811 and clickbeforeyoudig.com are used for all earth-moving activities including (but not limited to) drain tiling, grading, site excavation, fence building and road construction.

I don't have time to call 811 or visit clickbeforeyoudig.com, I'm on a schedule.

Calling 811 or using clickbeforeyoudig.com prior to any earth-moving activity is not only the law in all 50 states, doing so can help to prevent unnecessary costs or job delays and can even save a life.

I'm not digging that deep. Why bother calling 811 or using clickbeforeyoudig.com?

The depth of pipelines and other utilities can change over time due to erosion, shifting soils or other factors.

There are no markers where I will be digging, so I don't need to call 811 or use clickbeforeyoudig.com.

Markers, including those for pipelines, are meant to provide an approximate location and may not always be present.

Know what's below

Pipeline right-of-way (ROW) and pipeline location

A pipeline follows a narrow, clear stretch of land, called a ROW, that allows our employees and contractors to access the pipeline for inspections, maintenance, testing and emergencies. The ROW is not designed to function as a road, as heavy vehicles and equipment can damage the pipelines below.

A few important notes when it comes to the ROW and pipeline markers:

- The pipeline marker displays the operator's name, the product transported and an emergency phone number.
- Federal law prohibits removing, relocating or damaging pipeline markers.
- The ROW must remain clear to allow access for proper inspections, maintenance or in case of an emergency. Encroachments of the ROW such as structures, stockpiles, stored equipment and burn piles must have the company's written consent. Pipelines are patrolled from the air and the ground and obstructions can prevent proper inspections.
- The approximate location of a pipeline may be determined by a pipeline marker. However, markers should not be used to give exact locations and are not an alternative to calling **811** or visiting **clickbeforeyoudig.com**.
- Report any Enbridge pipelines exposed by erosion or other causes to our 24-hour emergency number for your area.

Our safety measures

Safety is, and always will be, our number one priority. Our team devotes significant time every year to keeping our systems running smoothly and without incident. We invest heavily in safety measures, including:

-  Inspection and preventative maintenance programs
-  Around-the-clock monitoring of pipelines and facilities
-  Emergency response training and drills for employees and local emergency responders
-  Pressure tests on new and existing pipelines
-  Aerial and ground patrols along the pipeline ROW
-  Automatic shut-off and remote-control valves
-  High-quality pipeline materials and protective coatings

Enbridge has enhanced safety measures for pipelines that cross bodies of water and highly populated or environmentally sensitive areas.

To read more about our pipeline safety efforts, visit enbridge.com/safety.

Vent marker

Line marker

Aerial marker

Marker appearance may vary in your area.

Know what's near you

Above ground facilities

While most Enbridge pipelines are buried underground, our system also includes additional facilities such as compressor stations, metering stations and natural gas storage. It's important that you know what to expect as part of the normal operations at these facilities.

Emergency and public officials like you can help us maintain a safe, secure and reliable pipeline system. If you notice any suspicious activity or abnormal odor near one of our above ground facilities, call 911 immediately, then call Enbridge's 24-hour emergency number found in this brochure.

Keeping pipelines safe

The objective of Enbridge's Integrity Management Program is to improve pipeline safety through a systematic approach involving data gathering, risk assessment, integrity assessments, prevention and mitigation.

The U.S. Department of Transportation has developed specific High Consequence Area (HCA) and Moderate Consequence Area (MCA) regulations for the operations and maintenance of pipelines. These regulations are more rigorous than those for non-HCA or non-MCA locations and focus integrity management activities on populated areas and areas where it would be difficult to evacuate people.

Facility and purpose	Normal operations
Compressor stations move natural gas through the pipeline at a consistent pressure.	Each station has built-in safety features that detect problems and automatically shut down equipment. During normal operations, no significant odors should be detected.
Metering stations measure and valve sites control the flow of products through the pipeline.	No significant odors should be detected during normal operations.
Natural gas storage helps balance supply and demand for natural gas. During periods when the need for natural gas is not as high, natural gas supplies are stored. When consumer demand increases, the supplies are put back into the interstate pipeline network for delivery.	Each facility has built-in safety features that detect problems and automatically shut down equipment. During normal operations, no significant odors should be detected.

Know what's there: Product information

Hazard awareness and prevention measures

Natural gas pipelines typically operate under high pressure and can move large volumes of gas, therefore accidents involving them can be hazardous.

If an incident occurs on an Enbridge pipeline, our representatives will provide the emergency responders with safety data sheets for the product in the pipeline.

The chart below provides general information about products transported through Enbridge pipelines. For more information, please see the Pipeline and Hazardous Material Safety Administration's Emergency Response Guidebook. Request a free copy or download the mobile app at phmsa.dot.gov/training/hazmat/erg/emergency-response-guidebook-erg.

Characteristics of natural gas	
Appearance	• Combustible mixture of hydrocarbon gases that is odorless.
Odor	• No odor will be detected unless an odorant is added for shipping
Special behavior	• Low density and lighter than air • In an open area, it rises into the atmosphere and dissipates • In an enclosed area, it collects first overhead
Hazards	• Extremely flammable and explosive • Suffocation can occur if vapors displace the oxygen in an enclosed area

Responding to a natural gas incident

In the unlikely event of an emergency involving natural gas, evacuate all unnecessary personnel and wear appropriate personal protective equipment. Contact Enbridge immediately so we can stop the product flow and then allow any fire that may be present to burn out. **Do not operate pipeline valves.**

For detailed information on product hazards and appropriate responses to a pipeline emergency, we encourage you to take free online pipeline emergency response training at mypipelinetraining.com.

Crossing or traversing the ROW

If any of your activities will encroach or cross an Enbridge pipeline/ROW or involve ground disturbance within the ROW, Enbridge should be contacted for an assessment and consent. Visit enbridge.com/crossings prior to planning any construction activity. Always notify a pipeline representative before beginning any construction activity in the vicinity of a pipeline ROW.

Some examples of such activities across, over, on, along or under an Enbridge asset and/or ROW include:

- Construction or installation of a new facility
- Operation or movement of vehicles, mobile equipment or machinery, outside of the traveled portion of a highway or public road
- Subdivision development
- Installation of agricultural drainage tile
- Overhead power lines that cross or parallel the specified area
- Maintenance of existing applicant facilities

All metallic foreign lines need to be assessed for potential impact on our corrosion control.

Enbridge should also be notified of blasting activities within 985 ft of an Enbridge pipeline ROW.

In addition to having your proposed activity assessed, we also have construction guidelines for you to follow when working around or near our ROW. Below are some general guidelines, however there may be more job-specific construction guidelines that our representative will provide you prior to beginning your work.

- 1 Once written consent is obtained, we require at least three working days' notice prior to the commencement of any work or excavation over or near our pipeline ROW so that we may field-locate our pipelines. No excavation, crossing, backfilling or construction operations shall be performed without the presence of a company representative who is authorized to stop any work that is being performed in an unsafe manner.
- 2 No building, structure or obstruction should be erected within the pipeline ROW. If you have questions related to the width of the pipeline ROW, just ask and we'll be happy to share that information with you.
- 3 A company representative must give written approval for heavy equipment to cross pipelines at any location.
- 4 Excavation within the pipeline ROW must be performed in accordance with company-approved procedures.
- 5 In addition to complying with the above requirements, you must follow all state and/or local laws and regulations including applicable One-Call requirements. To learn more, visit clickbeforeyoudig.com or dial **811**.

Crossing during an emergency:

If a crossing is required while responding to an emergency, please call Enbridge's emergency number before crossing the ROW.

Non-emergency crossings:

If you are planning work on the ROW, such as building a fence, deep tilling, digging a ditch, operating equipment or have crossings-related inquiries, please email crossingsus@enbridge.com.

For more information, visit enbridge.com/crossings.

Incident Command System

Enbridge utilizes the Incident Command System (ICS) for managing a response to an emergency.

The ICS organizational structure is designed to coordinate with other responding agencies and to include those agencies inside a unified command post for a coordinated response.

The ICS is a flexible, scalable tool that provides a common framework, uses common terminology and has standardized functional roles.

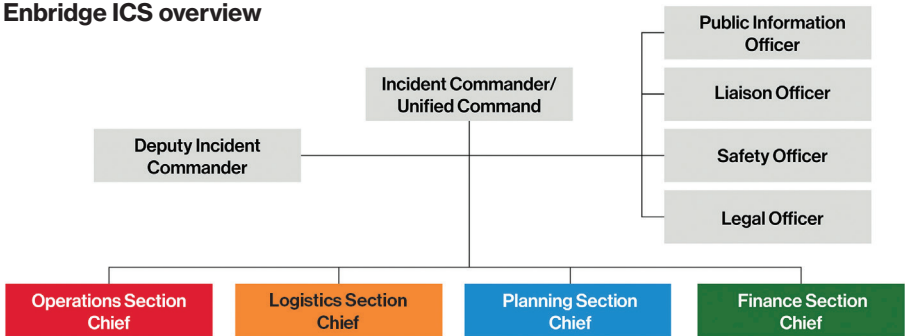

By using the ICS, trained personnel from throughout the organization can be deployed to support an incident.

Elements of the response management enabled through use of the ICS include:

- Incident action plan – defines objectives, strategies and resources that contribute to public safety, responder safety and the environment
- Site safety and security
- Traffic management
- Maintaining an exclusion zone
- Clean-up and waste management
- Public information management

Additional information on ICS can be obtained on the Federal Emergency Management Agency webpage at training.fema.gov/emiweb/is/icsresource.

Enbridge ICS overview

Emergency information

Information for 911 dispatchers

In the unlikely event of a confirmed or suspected pipeline emergency, dispatch local responders and contact the pipeline operator.

Advise the caller TO:

- **Leave the area immediately.** Abandon any equipment or vehicles and move away from the leak, heading upwind if possible. Avoid contact with any escaping liquids or gases.
- **Remain calm.** Emergency response and company personnel have been notified and will be arriving as soon as possible.
- **Evacuate if necessary.** Move to a designated evacuation center if instructed. If sheltering indoors, close all windows and doors, and turn off ventilation systems (e.g., air conditioning, heating).

Advise the caller TO NOT:

- Drive into the affected area or start their vehicle.
- Light matches or try to extinguish any fire.
- Turn on or off anything that could create a spark such as phones, light switches, keyless entry systems, flashlights, or appliances, until they're in a safe location.
- Attempt to operate any pipeline valves.

The role of the local responder

Besides handling traffic control, securing the site and fighting secondary fires, local responders often assist by:

- Making appropriate contacts if it appears that the pipeline incident impacts other agencies, facilities or local authorities
- Handling search and rescue
- Providing medical aid
- Coordinating a community emergency response plan, determining whether evacuation is warranted (mandating an evacuation, if required) and designating an evacuation center

Planning and zoning departments

Land development near pipelines

Public Officials involved in planning and zoning can help by verifying that land developers submit plans showing the accurate location of nearby pipelines and other buried utilities at the proposed site.

For additional information, see the Department of Transportation's recommended practices for developing land near existing pipelines and facilities, by visiting phmsa.dot.gov.

If any pipelines exist, ask the developer:

- ☐ Have you consulted with the utility operator?
- ☐ Have you, working with the utility operator, considered the need for ROW access or setback requirements?
- ☐ Have you considered evacuation routes to be used in the unlikely event of an emergency?
- ☐ How will you prevent excavation damage to buried utilities during construction?
- ☐ Are there plans for alternative uses for the pipeline ROW such as green spaces, parks, golf courses, trails and other recreational spaces?

Resources

Free training opportunity for emergency responders and 911 dispatchers

Emergency responders and others responsible for public safety in our counties of operation – including 911 dispatchers – can access the National Association of State Fire Marshals' Pipeline Emergencies online training program at mypipelinetraining.com.

The trainings can be completed in one or multiple sessions and a certificate is provided upon completion. This program may qualify for the following:

- Continuing education credits
- OSHA HAZMAT compliance
- Insurance Service Office Fire Suppression Rating Schedule Program

For more information, please contact us at **1-888-293-7867** or erinfo@enbridge.com.

Safe Community First Responder Grant Program

Enbridge offers grants to emergency response agencies in the communities where we operate. These grants can be used for equipment or training to help organizations respond effectively to pipeline emergencies.

For more information, visit enbridge.com/safecommunity.

Damage Prevention Program

Enbridge maintains a Damage Prevention Program in accordance with state and federal guidelines. The purpose of this program is to prevent damage to our pipeline facilities from excavation activities such as digging, trenching, blasting, boring, tunneling, backfilling or other activities such as heavy equipment crossing, storage on the right-of-way (ROW), etc. The Damage Prevention Program also monitors the depth of cover over our pipelines and conducts regular patrols of our ROW to monitor for unauthorized activities.

To learn more about our Damage Prevention Program, visit enbridge.com/damageprevention.

Emergency response plans

Our emergency response plans are available to emergency response organizations in counties where we operate. These plans provide information on the ways we'll work with emergency responders during the initial stages of a pipeline incident.

To request a copy of the emergency response plan for your area, please contact us.

Links for more information:

More information about our Emergency Management Program can be found at enbridge.com/emergencymanagement.

Public safety information can be found at enbridge.com/publicsafetyinfo.

You can find out where pipelines are in your area by going to the National Pipeline Mapping System website at npms.phmsa.dot.gov or by contacting one of our representatives at 1-888-293-7867.

Did you know? Contacting the pipeline operator as soon as possible means we can stop the product flow and make notifications as needed.

Emergency response information

Risk: Ignoring the critical safety information below could create additional hazards for the public, responders and the environment.

Recognizing a pipeline leak

In the unlikely event of an emergency, protecting the public is our top priority. We rely on your expertise and are committed to providing the information you need. While our emergency response teams are dispatched immediately, initial reports often go to 911 or other public safety officials. The following items could indicate a potential pipeline emergency and may be reported by callers or emergency responders.

You might see:

- Dirt being blown or appearing to be thrown into the air
- Flames, if gas is ignited
- A white vapor stream or mist-like cloud
- Unexpected frost buildup on the ground
- Dead or dying vegetation in an otherwise green area
- Continuous bubbling in wet areas or at a pond, creek or river

You might hear:

- An unusual roaring, blowing, hissing or loud whistling sound

You might smell:

- Odorized pipelines: An unusual sulfur or rotten egg odor
- Unodorized pipelines: A slight smell similar to diesel fuel or oil

In the unlikely event of a pipeline emergency, we will work with emergency responders to resolve the situation safely and effectively.

Steps for a safe response

- 1** Abandon any mechanized equipment and ignition sources in the suspected leak's vicinity.
- 2** Secure the site and determine a plan to evacuate or shelter in place.
- 3** Monitor for hazardous atmospheres.
- 4** Control and redirect traffic.
- 5** Provide immediate access to Vector representatives.
- 6** Implement your local emergency plan.

In the unlikely event of an emergency

Do not operate pipeline valves or extinguish any pipeline fires.

Doing so may prolong or worsen an incident or even cause another leak in the pipeline. Our control center personnel can close some valves automatically, while trained employees must manually close others.

Do not create a spark. Possible ignition sources include smoking materials, open flames, light switches, telephones, cell phones, pagers, flashlights, keyless entry remotes, motor vehicles and other electronic devices.

Do not enter a Vector facility without permission.

If a fire occurs at one of our facilities, unless lives are at risk, we ask that fire crews stay outside of the property.
